

PLASTIC STORAGE SYSTEMS

PRODUCT RANGE

REA PLASTIC STORAGE SYSTEMS

REA, creative solutions.

• Euro rack

The solution

REA plastic storage systems offer efficient solutions for every storage space. The modular system ensures optimum use of space in cold-rooms, deep-freeze units (down to -40°C) dry goods storage and production areas.

Applications

All food sector industries, supermarkets, hotels, restaurants, catering establishments, hospitals, public care institutions, rehabilitation centres, laundries, shipping, laboratories, swimming pools and leisure centres.

The material

REA systems are manufactured from high-grade synthetic material, which is suitable for high care heavy-duty applications with temperature capabilities of between -40°C to $+80^{\circ}\text{C}$. The plastic used does not corrode, is cadmium-free, rust and damp-resistant and totally approved suitable for food use. The material has a smooth surface, which is very easy to clean. All the above characteristics ensure an exceptional performance with a long life span.

Dimensions

REA plastic storage systems are available in a wide range of sizes with no height restrictions. Besides the extensive standard range, many variable expansion features are possible to handle that special requested application. All types of product groups can be made to measure. Automated methods of production allows products to be manufactured at standard economy prices without longer delivery times.

Easy to assemble

Assembly is simplicity itself, without any special skills or tools, one person can assemble the REA system rack in just a few minutes, ready for instant use.

Mobile

All units can be supplied on wheels. Depending on application and requirement, several castor types are available. Euro racks are usually fitted with stainless steel housings with nylon wheels. Gastro racks, trolleys and workstations are fitted with plastic castors and low noise wheels with non-marking surface. The swivel castors are available with or without a brake. Castor requirements can always be met to suit your needs. Rubber buffers are optional for units where walls and skirting damage is to be avoided.

Available colours

REA plastic storage systems are available in two colour options. Classic style is the standard format which has blue/green tube extrusions with red end caps. Design style has grey end caps and highlights.

▪ Classic

▪ Design

Original Dutch Design

REA plastic storage systems never cease to satisfy the user. The indestructible reliability has been proven for more than 40 years. The characteristic colours and the REA quality label will help you recognize the unique brand.

HACCP

Plastic is easy to clean and does not corrode. REA plastic storage systems are the perfect answer to HACCP demands.

ISO and TÜV

REA's quotation, order and production process, as well as logistics, are all performed in accordance with ISO 9001 quality assurance control system. In addition to REA's quality stamp, the TÜV certificate provides an additional guarantee for proven reliability and safety.

Personal advice

REA has a creative, efficient and economic solution for every storage situation. Your requirements are what count. Personal advice combined with fast and reliable service is of top priority at REA.

A good investment

Quality, creativity, flexibility, functionality and durability form the foundation of REA's success. These qualities combined with attractive pricing, ensure that you are making a good investment.

LEISURE

With experience in the food sector, REA also has developed a range of products for the leisure industry. Storage products for swimming pools, sports facilities, fitness and rehabilitation units are widely used. A separate product range brochure is available with more information about specific features.

EURO RACKS

REA Euro racks have developed from the original success in design for plastic storage racks. A continuous process of modifications and enhancements has led to the current version of the Euro rack. It's a strong, sturdy and stable storage system designed for a long life. The load bearing capacity per running meter is 200 kg. If necessary, the load bearing capacity can be increased by adding further posts. If the system is used for light storage, fewer posts will suffice. Euro racks can be made to measure. This means they are extremely functional within the constraints of the given space. The racks are ideal for use in cold storage, deep-freeze, pickling rooms, (bulk) dry goods storage, kitchens and laundries.

Convenient to use

Euro racks are very convenient to use. Assembling the racks is simple and very quick. Space-saving corner structures are available in 3 different versions. Each corner structure provides adequate access to the racks and ensures maximum use of the corners; a necessity in small store-rooms.

Safe storage

Smooth, splinter-free and rounded shelves prevent damage to products and packaging.

Storage is always safe. Removable plastic shelf covers can be fitted easily on the shelves for safe storage of bottles and small products and to prevent leakage to lower shelves.

Hygiene

The plastic material can be cleaned easily and is extremely hygienic; it conforms fully with HACCP guidelines.

REA PLASTIC STORAGE SYSTEMS

MARITIME RACKS

REA Maritime racks are designed for use in a ship's store room, where control of goods in storm conditions is essential. The same principle as the Euro rack applies, but the racks are fitted with a storm rail which can be removed for access and removal of goods. The racks are light weighted, but at the same time strong, sturdy and stable. They can be fixed to the wall with plastic brackets. An optional sturdy adjustable foot is available. All of the above detailed features ensure protection of goods with safety in mind.

GASTRO RACKS

The main feature of REA Gastro racks is the advantage of the removable shelf grilles, which can easily be placed in the dish washer for thorough cleaning during the daily washing routine. Therefore they are ideal for industrial kitchens, hotels, restaurants and catering facilities. This sturdy system has a stylish and unique design that guarantees quality and durability. Ventilation holes in the grilles increase air circulation, which means that Gastro racks are also suitable for use in cold storage and deep-freeze rooms. The grilles are available in two sizes for optimum flexibility. The load bearing capacity per running meter is 120 kg. If necessary, the load bearing capacity of Gastro racks can be increased by adding further posts.

Easy to use

Gastro racks are extremely practical and easy to use. Assembling the racks is simple and very quick. A space-saving corner structure ensures easy access and maximum use of the corner space. If you remove the grilles, you can use Gastronorm bins and trays.

Hygienic

The synthetic material is easy to clean and conforms with the hygiene guidelines of HACPP.

CONTAINER, TRAY AND CANTEN TROLLEYS

REA trolleys are ideal general canteen equipment, which works well to achieve the neat storage of bins, trays, baskets, service trays and plates. The well-known bin and tray sizes Euronorm and Gastronorm are standard models in REA's range of trolleys. Custom sizes can also be supplied. The trolleys will be delivered in fixed format for immediate use.

Other formats are available

A wide range of standard trolleys is available. They all come with many innovative features. The number of rails and the height between them can be determined in advance. Bins with different heights can be combined in a single trolley as desired. Multiple linked versions are available to provide operational flexibility.

Euro and Gastro racks can be linked if necessary. Trolleys are also available in static form if required.

A food grade work surface can be fitted at the desired height to create a handy preparation table, where miscellaneous tasks can be performed. Ingredients, utensils or kitchenware can be stored in the bins below the worktop for immediate use.

Special custom trolleys and preparation tables can be produced for any combination of containers. Being automatically machine manufactured, size variations can be produced fast and economically.

Hygiene

The plastic used for the products in this group can also be cleaned thoroughly and easily. (HACCP guideline)

WORK TABLES

Plastic work tables highlight yet again the flexibility of REA products. The tables, which are static, mobile or semi-mobile, can be made to measure and provided with a plastic or stainless steel working surface. REA tables are available with a wide range of features.

SPECIALS

The REA system offers a variety of features and dimensions. The selected special format shows this unique flexibility.

New special versions can be seen on our website, www.rea.nl, which is updated regularly.
